

## Sealmatic Achieves Prestigious ISO 3834-2 Certification

Sealmatic India Ltd (BSE listed: 543782), is pleased to announce that it has successfully achieved ISO 3834-2 certification for its welding processes, specifically applicable to the welding activities carried out for API pressure vessels, thus; marking a significant milestone in the ongoing commitment to quality, reliability and manufacturing excellence. This internationally recognized certification of ISO 3834-2, further reinforces focus on delivering products that meet the highest global standards, especially for critical and demanding industrial applications.

ISO 3834-2 is an internationally recognized standard that defines comprehensive quality requirements for fusion welding of metallic materials. Welding for API pressure vessels is classified as a critical and special process, as the integrity of welded joints directly impacts safety, reliability and performance and cannot always be fully verified through final inspection alone. The standard therefore emphasizes strict control over the entire welding process, including planning, procedure qualification, execution, inspection, documentation and ongoing supervision. For industries such as oil & gas, power, petrochemical, chemical and other process sectors where pressure equipment plays a vital role, ISO 3834-2 serves as a strong assurance of consistent and dependable manufacturing quality certification.

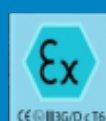

*“Our achievement of ISO 3834-2 certification reflects rigorous compliance with stringent welding requirements applicable to API pressure vessels. The certification was awarded after a detailed evaluation of our welding systems, infrastructure, procedures and quality controls. It confirms that Sealmatic follows qualified welding procedures, employs certified and competent welders and maintains strict control over welding process, base materials, equipment calibration, inspection techniques and traceability records”, says; Mr. Shekhar Bhalerao – Manager (QMS Department).*

The journey toward ISO 3834-2 certification involved a disciplined and systematic approach across all welding related functions. Special focus was placed on ensuring that welding processes meet the stringent requirements associated with API pressure vessels equipment, where safety margins, metallurgical soundness and compliance with codes are of utmost importance. Sealmatic continues to elevate its manufacturing excellence and reinforce its position as a trusted partner for high-quality mechanical sealing and pressure vessels solutions across global markets.
